Yu, Z.-Q., 127

Subject Index of Volume 75

Adsorption
effect of, of polymeric additives on wet grinding of minerals:
dispersion and fine grinding of concentrated suspensions, 11
mechanisms of suspension stabilization, 1
Aluminium
attrition of hydrargillite ($Al(OH)_3$): mechanism and quantification of particle fragility by new attrition index, 49
Attrition
of hydrargillite ($Al(OH)_3$): mechanism and quantification of particle fragility by new attrition index, 49

Bubble column
slurry: estimation of gas holdup in slurry bubble column with internals; nitrogen–Therminol–magnetite system, 153

Coherence function
vertical division of flow regions in gas–solid fluidized bed by means of, 127
Cohesive properties
influence of surfactants and interactive mixing on, of poorly wettable solid, 159
Compaction behaviour
comparative study of effects of water content on, of some food materials, 59
Crystal structure
effect of intensive grinding on, of dolomite, 145

Density
effect of size and, of solids on some fundamental hydrodynamic variables used in fluidization, 181
Desulphurization
flue gas, at low temperatures: characterization of structural changes in solid sorbent, 167
Dolomite
effect of intensive grinding on crystal structure of, 145
Drilling
multiphase hydrodynamic analysis of pneumatic transportation of drill cuttings in air drilling, 133

Electrostatic separation
of powder mixtures based on work functions of its constituents, 79
Ethyl xanthate
influence of oxidation degree of galena surface and of, on stability of galena–air aggregates, 43

Fine powder
difficult-to-fluidize; fluidization and entrainment of, mixed with easy-to-fluidize large particles, 189
Flow regions
vertical division of, in gas–solid fluidized bed by means of coherence function, 127
Flue gas desulphurization
at low temperatures: characterization of structural changes in solid sorbent, 167
Fluidization
by sudden application of vacuum, 197
effect of size and density of solids on some fundamental hydrodynamic variables used in, 181
and entrainment of difficult-to-fluidize fine powder mixed with easy-to-fluidize large particles, 189
Fluidization velocity
minimum; prediction of, 67
Fluidized bed(s)
gas-; analysis of models for heat transfer between, and immersed surfaces, 173
gas–solid; vertical division of flow regions in, by means of coherence function, 127
particle impact probe for hydrodynamic studies in, 21
Food materials
some: comparative study of effects of water content on compaction behaviour of, 59

Galena
influence of oxidation degree of galena surface and of ethyl xanthate on stability of galena–air aggregates, 43
Gas holdup
estimation of, in slurry bubble column with internals: nitrogen–Therminol–magnetite system, 153
Grinding
intensive; effect of, on crystal structure of dolomite, 145
wet: effect of adsorption of polymeric additives on, of minerals:
dispersion and fine grinding of concentrated suspensions, 11
mechanisms of suspension stabilization, 1

Heat transfer
analysis of models for, between gas-fluidized beds and immersed surfaces, 173
Hydrargillite
attrition of $Al(OH)_3$: mechanism and quantification of particle fragility by new attrition index, 49
Hydrodynamic analysis
multiphase, of pneumatic transportation of drill cuttings in air drilling, 133
Hydrodynamic studies
particle impact probe for, in fluidized beds, 21
Hydrodynamic variables
some fundamental: effect of size and density of solids on, used in fluidization, 181

Maltodextrins
evaluation of, as tablet excipients: micromeritic and compressional characterization, 97
Metal powders
solution and experimental validation of mathematical model for vibration milling of, 89
Minerals
effect of adsorption of polymeric additives on wet grinding of:
dispersion and fine grinding of concentrated suspensions, 11
mechanisms of suspension stabilization, 1

Mixing
interactive; influence of surfactants and, on cohesive properties of poorly wettable solid, 159
Model(s)
analysis of, for heat transfer between gas-fluidized beds and immersed surfaces, 173
empirical, of efficiency of commercial polyelectrolytes on secondary settlers design, 119
mathematical; solution and experimental validation of, for vibration milling of metal powders, 89
permeable rock, using array of pores, 107

Nitrogen–Therminol–magnetite system
estimation of gas holdup in slurry bubble column with internals, 153

Oxidation degree
influence of, of galena surface and of ethyl xanthate on stability of galena–air aggregates, 43

Particle fragility
mechanism and quantification of, by new attrition index: attrition of hydrargillite ($Al(OH)_3$), 49
Particle impact probe
for hydrodynamic studies in fluidized beds, 21
Particulates
shape separation of, by rotating horizontal sieve drum, 113
Permeable rock model
using array of pores, 107
Pneumatic transportation
multiphase hydrodynamic analysis of, of drill cuttings in air drilling, 133
Polyelectrolytes
commercial; empirical model of efficiency of, on secondary settlers design, 119
Polymeric additives
effect of adsorption of, on wet grinding of minerals:
dispersion and fine grinding of concentrated suspensions, 11
mechanisms of suspension stabilization, 1
Polymers
highly dispersed precipitated silicas as agents improving products made on base of, and as thickening agents in toothpastes, 29
Pores
permeable rock model using array of, 107
Powder mixtures
electrostatic separation of, based on work functions of its constituents, 79

Rotating horizontal sieve drum
shape separation of particulates by, 113

Secondary settlers design
empirical model of efficiency of commercial polyelectrolytes on, 119
Shape separation
of particulates by rotating horizontal sieve drum, 113
Silicas
highly dispersed precipitated, as agents improving products made on base of polymers and as thickening agents in toothpastes, 29
Slurry bubble column
estimation of gas holdup in, with internals: nitrogen–Therminol–magnetite system, 153
Solid sorbent
characterization of structural changes in: flue gas desulphurization at low temperatures, 167
Stability
influence of oxidation degree of galena surface and of ethyl xanthate on, of galena–air aggregates, 43
Structural changes
characterization of, in solid sorbent; flue gas desulphurization at low temperatures, 167
Surfaces
immersed; analysis of models for heat transfer between gas-fluidized beds and, 173
Surfactants
influence of, and interactive mixing on cohesive properties of poorly wettable solid, 159
Suspension(s)
concentrated: dispersion and fine grinding of; effect of adsorption of polymeric additives on wet grinding of minerals, 11
mechanisms of, stabilization: effect of adsorption of polymeric additives on wet grinding of minerals, 1

Tablet excipients
evaluation of maltodextrins as: micromeritic and compressional characterization, 97
Thickening agents
highly dispersed precipitated silicas as agents improving products made on base of polymers and as, in toothpastes, 29
Toothpastes
highly dispersed precipitated silicas as agents improving products made on base of polymers and as thickening agents in, 29

Vacuum
fluidization by sudden application of, 197
Vibration milling
solution and experimental validation of mathematical model for, of metal powders, 89

Water content
comparative study of effects of, on compaction behaviour of some food materials, 59
Wettability
influence of surfactants and interactive mixing on cohesive properties of poorly wettable solid, 159
Work functions
electrostatic separation of powder mixtures based on, of its constituents, 79
